

## CAMERA READY INSTRUCTIONS

Everywhere below exchange **XXX** in file names with the paper ID with 0 padding (e.g. 019 for paper ID 19 and 119 for paper ID 11).

1. For the camera ready version please use the **new** author kit available at

<https://www.dagm-gcpr.de/fileadmin/dagm-gcpr/gcpr2023-camera-ready-kit.zip>

The author kit has been updated recently, so please copy your paper into the new template and follow the instructions in the Tex-template.

It is not mandatory, but Springer encourages to include the ORCID-ID (see `\orcidID{0000-1111-2222-3333}` in the LaTeX template) for each author. If an ORCID-ID does not exist yet, it can be obtained from [www.orcid.org](http://www.orcid.org). If you do not want to use the ORCID-ID, please remove `\orcidID{...}` in the LaTeX template.

2. Page limit: **13 pages excluding references**. We increase the page limit by 1 page for the camera ready version to accommodate author names and affiliations, acknowledgements etc.

3. Copyright form: Please fill the copyright form **XXX-copyright.docx** from the camera ready kit.

It should contain the name of the corresponding author. The form should be signed by the corresponding author by hand and scanned.

4. The camera ready submission must include a single **XXX.zip** file:

- The scan of the signed copyright form named as **XXX-copyright.pdf**.
- A text file "**contact.txt**" containing the name and email address of the corresponding author. This email will be used to contact you to proofread the publication-ready paper.
- The pdf file of the submission named as **XXX.pdf**. Only the main paper, without supplement.
- A **single** main source TEX-file named as **XXX-main.tex**. Please make sure that tables and equations are editable, and not pasted in as figures.
- **bib** and **XXX-main.bbl** files. The bbl file is required to avoid omission of data during conversion from bib to bbl.
- Image files. All figures are printed in black and white, unless special arrangement has been made for colored figures. Colored figures remain in color in the online version. Please make sure that any colored figures are equally clear in black and white.
- Do not use any subdirectories and paths in the LaTeX file.

Before submitting the files make sure that the source files compile and that the compiled version is identical to **XXX.pdf**. Do **not** include XXX-main.pdf or any log files or other files that are not required to compile the LaTeX file. Please note that overleaf and some editors sometimes compile the files despite of errors. Please check that there are no errors in the log files like missing bracket inserted.

**Optional:** You can provide supplementary material as an additional ZIP file named **XXX-supp.zip**. The supplementary file can include one video and/or one PDF. The size limit of the zip file is 100 MB. See also the format instruction for the video:  
<https://www.springer.com/gp/computer-science/lncs/embedded-videos/15066970>

For submitting the file(s):

- Login into CMT and Create Camera Ready Submission.
- Update Title and Abstract as in the camera-ready paper.
- Double check names, affiliations, and order of all authors. The names and order should match the order in the camera-ready paper.
